## DETAILED ACTION

### *Drawings*

Figure 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). The Japanese wording on this Figure must also be removed. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Algots et al. (US 6,192,064). Algots discloses the claimed invention as follows:

Regarding claims 1-2, Algots discloses a wavelength control device for a laser device including a movable holder for making an optical component 14C movable with respect to a laser optical axis, and a laser controller 24A for moving said optical component 14C with respect to the laser optical axis and changing an incident angle of laser light on a band narrowing optical component (the grating) to thereby control a center wavelength of the laser light to be a target

Art Unit: 2828

wavelength, wherein said movable holder comprises a first drive mechanism 14B that is a piezoelectric element moving by a short distance, and a second drive mechanism 15 that is a pulse motor unit moving by a longer distance than the first drive mechanism.

Regarding claims 3-8, there is a wavelength monitor 22 for monitoring the wavelength of the laser light. The remainder of the limitations in these claims are a general operation of the device that will necessarily occur in Algots as the claimed structure is identical to the prior art structure. Process limitations cannot impart patentability to a product claim where the product is not patentably distinguished over the prior art. *In re Dike*, 394 F.2d 584, 157 USPQ 581 (CCPA 1968).
